

1 / Model of thinking

We need a site with these features :

1. Authentication(sms-OTP for simplicity)
2. Admin's portal for:
 - a. Adding/removing foods
 - b. Adding/removing clients
 - c. watching orders in these stages :
 - Waiting for accept
 - Rejected
 - Accepted
 - Done
3. Menu for foods(Categorized)
4. Cart

As endpoints:

/vX/admin:

/auth : POST

/ : GET

/vX/user:

/auth : POST

/cart : GET, POST

/vX/order:

/ {ORDER_ID} : GET

/add : POST *HIGH_PERMISSION

/remove : POST/DELETE *HIGH_PERMISSION

/update: POST/PUT *HIGH_PERMISSION (chef is enough)

/vX/food:

/ {FOOD_ID} : GET

/ : GET (?order_by)

/add : POST *HIGH_PERMISSION

/remove : POST/DELETE *HIGH_PERMISSION

/update: POST/PUT *HIGH_PERMISSION (chef is enough)

/vX/cart:

/ : GET, POST

*** we've skipped payment redirect/approval
